OVERVIEW

Define HealthCare Emergency Management?

What is an EOP?

What is a COOP?

COOP components

What is Healthcare emergency Management?

Field of health emergency and disaster preparedness refers to the knowledge and capacities to effectively **anticipate, respond** and **recover** from the impacts of likely, imminent or current hazardous events or conditions. (PAHO/WHO)

The concept of emergency preparedness is defined as “a **continuous** cycle of planning, organizing, training, equipping, exercising, evaluating, and taking corrective active in an effort to **ensure effective coordination** during incident response” (The Joint Commission)

Public health emergency preparedness (PHEP) is the capability of the public health and health care systems, communities, and individuals, to **prevent, protect** against, quickly **respond** to, and **recover** from health emergencies, particularly those whose scale, timing, or unpredictability threatens to overwhelm routine capabilities. Preparedness involves a coordinated and continuous process of planning and implementation that relies on measuring performance and taking corrective action. (National Library of Medicine)

New and revised standards in emergency management

Reference Guide: Emergency Management Standards						
Effective July 1, 2022, for Hospitals (HAP) & Critical Access Hospitals (CAH) Only

Comprehensive Emergency Management Program

- Mitigation
- Evaluation
- Preparation
- Execute
- Recovery
- Planning
- Recovery

EM.10.01.01

Hospital leadership provides oversight and support of the emergency management program.

2. The hospital's senior leaders identify a **qualified individual** to lead the emergency management program who has defined responsibilities, including, but not limited to, the following:

- Develops and maintains the emergency operations plan and policies and procedures
- Implementation of the **four phases of emergency management** (mitigation, preparedness, response, and recovery)
- Implementation of emergency management activities across the **six critical areas** (communications, resources and assets, safety and security, staff responsibilities, utilities, and patient clinical and support activities)
- Coordinates the emergency management exercises and develops after-action reports
- **Collaboration across clinical and operational areas** to implement organization wide emergency management - Identification of and collaboration with community response partners
 - Note: Education, training, and experience in emergency management should be taken into account when considering the qualifications of the individual who leads the program

Change?

Emergency Management versus

Resilience

- Resilience refers to the ability of a system, community or society exposed to hazards to resist, absorb, accommodate, adapt to, transform and recover from the effects of a hazard in a timely and efficient manner, including through the preservation and restoration of its essential basic structures and functions through risk management. Health system resilience can be defined as the capacity of health actors, institutions and populations to resist, prepare for and effectively respond to crises; maintain core functions when a crisis hits; and, informed by lessons learned during the crisis, reorganize if conditions require it.

Trivia facts #1

Where was Dr Pepper invented???

TEXAS – Created by Charles Alderton in Waco, it was originally marketed in 1904. The secret recipe is kept in two halves in safety deposit boxes in two different Dallas banks.

What is COOP?

Continuity of Operations planning is an internal effort within an agency or organization to ensure the continuity of their **essential functions** across a wide range of potential emergencies.

Continuity of operations planning “ensures the ability to continue essential business operations, patient care services, and ancillary support functions across a wide range of potential emergencies. The health care organization’s continuity of operations planning may be an annex to the organization’s emergency operations plan (EOP) and during a response should be addressed under the incident command system. (The Joint Commission)

EM.13.01.01

The hospital has a continuity of operations plan.

Note: The hospital considers its prioritized hazards identified as part of its hazard vulnerability assessment when developing a continuity of operations plan.

1. The hospital has a **written** continuity of operations plan (COOP) that is developed with the **participation of key executive leaders, business and finance leaders, and other departments leaders** as determined by the hospital. These key leaders identify and prioritize the services and functions that are considered essential or critical for maintaining operations.

Note: The COOP provides guidance on how the hospital will continue to perform its **essential business functions** to deliver essential or critical services. Essential business functions to consider include administrative/vital records, information technology, financial services, security systems, communications/telecommunications, and building operations to support essential and critical services that cannot be deferred during an emergency; these activities must be performed continuously or resumed quickly following a disruption.

2. The hospital's continuity of operations plan identifies **in writing how and where it will continue to provide its ESSENTIAL BUSINESS FUNCTIONS** when the location of the essential or critical service has been compromised due to an emergency or disaster incident.

Note: Example of options to consider for providing essential services include use of off-site locations, space maintained by another organization, existing facilities or space, telework (remote work), or telehealth.

How Do We Do COOP?

Remember we got your number

8 Elements Of A COOP Plan

Essential Functions

Human Capital and Key Personnel

Delegation of Authority and Orders of Succession

Vital Records, Systems, Databases, and Equipment

Communications

Alternate Facilities

Reconstitution and Devolution

Testing, Training, and Exercises

6 Goals of COOP

- Ensure timely and orderly continuous performance of essential functions during and after an emergency
- Protect facilities, equipment, people, records and other assets that support essential functions
- Reduce/mitigate disruption to operations
- Resume normal operations after an emergency
- Minimize loss of life and injury
- Family support for personnel

7 Phases of Program Development

Initiate COOP program

Identify functional requirements

Design and develop the plan

Implement the program

Test, train, exercise

Revise and update the plan

Execute the plan

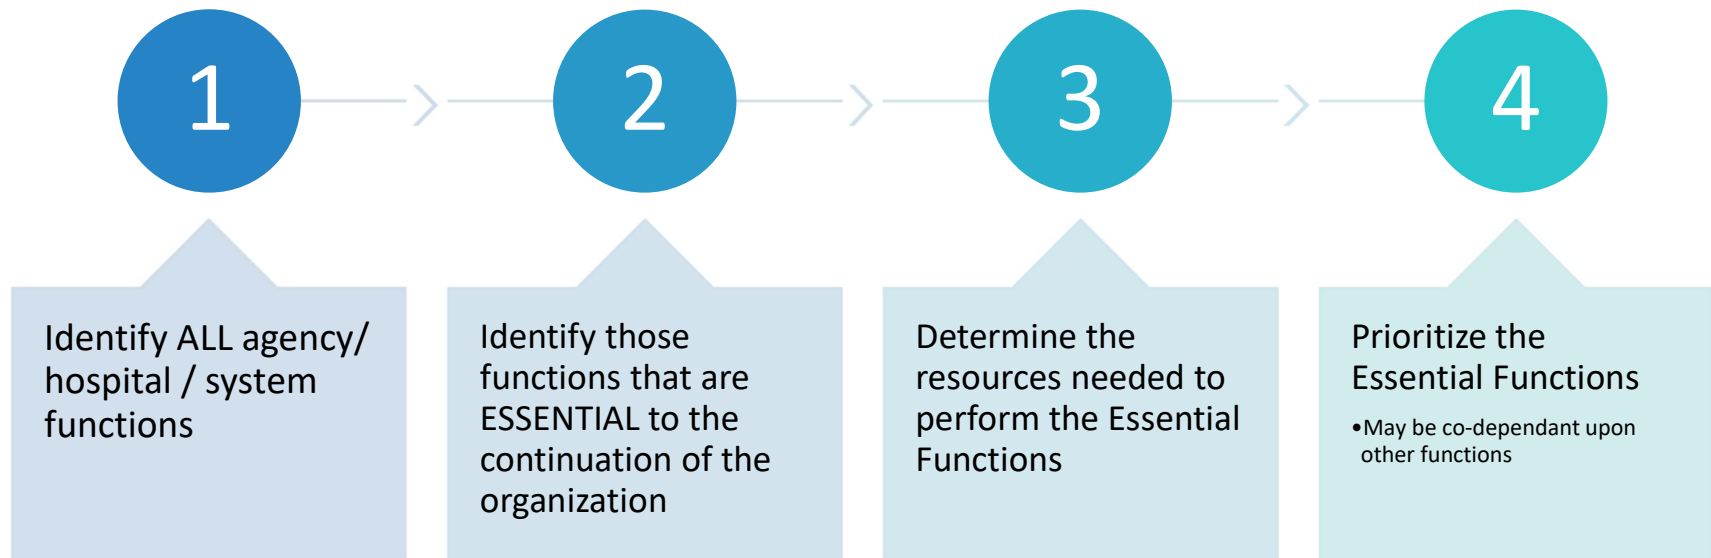

What Are Essential Functions?

Essential functions are a SUBSET of a business's functions that encompass only those services that must continue even in an emergency.

Essential functions are those functions that should be resumed immediately as possible

- YES: Emergency medical care, payroll, clinical services, security, business office
- NO: Mentoring programs, non-affiliated internships

IDENTIFICATION: A 4-Step Process

Random Trivia Fact #2

Where does Six Flags get
its name???

The Six Flags theme park is named for the six countries that have ruled over Texas. These six countries are Spain, France, Mexico, the Republic of Texas, the United States, and the Confederate States of America. The six flags can be found on the reverse of the Seal of Texas.

Essential Functions

Essential Function	Critical Process/Service	Priority
Provide emergency medical care	Ensure safe environment, clinical support services (lab/x-ray/pharmacy), power, medical gases, supplies	1

Essential Functions

Essential functions are those that must be maintained to fulfill the mission statement of the organization and the specific operations of each program. Essential functions are those that provide vital services and sustain the organization's economic base. The Federal Emergency Management Agency defines essential functions as "those functions that cannot be interrupted for more than 12 hours/must be resumed within 30 days"; The essential functions listed encompass the key activities our organization fulfills on a day-to-day basis.

Human Capital and Key Personnel

Those positions necessary to perform a business's essential functions.

Placing the right people in the right jobs

If these positions are left unattended, a business will not be able to meet the needs of the community or maintain its essential functions.

Investing in training and development to build skills and competencies

Utilizing "non-essential" personnel in alternate assignments

Ensure that all employees have a clear understanding of what to do in an emergency.

Key Personnel

Essential Function	Critical Process/Service	Priority	Key Positions
Provide emergency medical care	Ensure safe environment, clinical support services (lab/x-ray/pharmacy), power, medical gases, supplies	1	Physicians, nurses, lab tech, x-ray tech, pharmacist, clerical support

Identify

Identify which authorities should be delegated and what are the triggering conditions

Determine

Determine type of authority

- Emergency
- Administrative

Determine

Determine qualifications and skills for key positions

Identify

Identify personnel receiving authority and train them

Delegation of Authority/Orders of Succession

Administrative Authority

The ability to make decisions that have effects beyond the duration of the emergency. Unlike emergency authority, administrative authority does not have a built-in expiration date. Such decisions involve policy determinations and include hiring and dismissal of employees and allocation of fiscal and non-monetary resources. Statutory or constitutional law may limit the delegation of this kind of authority, and counsel may need to be consulted when determining this type of delegation of authority. Specific authorities being delegated should be documented separately.

Emergency Authority

Remember that emergency authority may be best delegated to members of the Disaster Preparedness Office or members of the Emergency Management Subcommittee. Emergency Authority refers to the ability to make decisions related to an emergency, such as deciding whether to activate the Emergency Operations or Continuity of Operations plan[s], deciding whether to evacuate a building, or determining which Mission Partners should report for their duties.

Why Have A Succession Plan?

Prepares the business for planned departures as well as for emergencies.

Provides for consistency of operations.

Reduces stress during transition whether caused by emergency or not.

Preserves institutional knowledge & expertise.

Maintains the business's functionality with minimal interruption.

Essential Function	Critical Process/Service	Priority	Key Positions	Position Receiving Authority
Provide emergency medical care	Ensure safe environment, clinical support services (lab/x-ray/pharmacy), power, medical gases, supplies	1	Physicians, nurses, lab tech, x-ray tech, pharmacist, clerical support	Assistant Director or Director's Designee

Delegation of Authority

Orders of Succession

Key Position	Successor 1	Successor 2	Successor 3
ED Director	ED Assistant Director	ED Manager	ED Charge Nurse

Identify VITAL records from Records

Records: anything created or received by an organization during its business.

A record could be on any media

Could be temporary or permanent.

Vital Records: are records, regardless of media, which if damaged or destroyed, would:

Disrupt business operations and information flow;

Cause considerable inconvenience; and

Require replacement or re-creation at considerable expense.

○ **Vital Record Go-Kits**: Have copies/back-ups ready to take with you

Vital Records, Systems, and Equipment

Communications

Communication systems should provide:

- Ability to communicate with:
 - Personnel
 - Patients/clients
 - Other agencies
 - Jurisdictional authorities
- Access to data and systems
- Ability to support COOP operations
- Interoperability

THINKING
DIFFERENT

Random Trivia Fact #3

Where / What is the 8th Wonder of the World???

Constructed in 1964, the Astrodome was deemed the “Eighth Wonder of the World” when it opened in 1965. As the world’s first indoor, air-conditioned domed stadium, the 18-story multipurpose structure set the bar for arena design and construction for decades to come. A year after opening, it showcased the first installation of an artificial playing surface, soon to be known as Astroturf.

Systems to Support Essential Functions

Preventative Controls

- Uninterruptible power supply
- Generators
- Fire and smoke detectors
- Server back-up systems

Media Relations

Chain of Communication

Alternate Facility

Location where key personnel can carry out the essential functions of the organization when the primary location is unavailable

Factors to Consider:

- Location
- Building type
- Space
- Distance
- Transportation
- Communications
- Security
- Lodging/Food
- Accessibility

Alternate Facility Options

Secondary Facility

- Stand alone space
- Re-purposing of current space
- Mobile facility

Cooperative Agreements

- Mutual aid agreements

Tele-work

- Home or satellite offices

Reconstitution

Process in which organization resumes normal operations at original or replacement primary operating facility.

OR

- Returning to normal operations somewhere....

Reconstitution Team

Determine when original facility can be accessed or locate new primary facility

Develop a time-phased approach plan for resuming operations

Inform employees

Transport materials, supplies, and personnel

Notify public and regulatory agencies

Worst Case Scenario

DEVOLUTION

- Transferring authority and responsibility for essential functions to other employees and facilities

Testing, Training, Exercises

Educate

- Educate employees on their roles
- Functions, procedures and responsibilities

Verify

- Verify that COOP plan works
- Demonstration of correct operation of equipment, procedures and processes outlined in plan

Clarify

- Clarify where COOP plan needs revision
- After action reports and corrective action plans

Familiarize

- Familiarize with alert, notification, & deployment procedures

Ensure

- Ensure that employees can perform essential functions during COOP event

Confirm

- Confirm that employees are familiar with reconstitution procedures

Random
Trivia Fact
#4

WHAT WAS THE FIRST
WORD SPOKEN FROM
THE MOON?

**“Contact Light, engine stop”
Technically correct...**

**But the MYTH from TEXAS...
“Houston, Tranquility Base
here. The Eagle has Landed”**

A Daunting Task...

Healthcare agencies uniquely different than governmental agencies and regular businesses

- Patient care does not stop
- In disasters, community turns to healthcare
- Many, many integrated moving parts
- Regulatory and licensing oversight
 - TJC, DNV, DSHS, CMS, etc

Most focus placed on IT back-up

No idea where to start

COOP Template Includes

8 Elements of COOP

- Essential Functions
- Key Personnel
- Order of Succession
- Vital Records
- Alternate Facilities
- Communication
- Reconstitution
- Testing, training

6 Goals of COOP

- Continuous performance of essential functions
- Protect
- Reduce/mitigate disruption
- Resume normal operations
- Minimize loss of life
- Family support for personnel

7 Phases of COOP

- Initiate program
- Identify requirements
- Design plan
- Implement
- Test, train, exercise
- Revise and update
- Execute plan

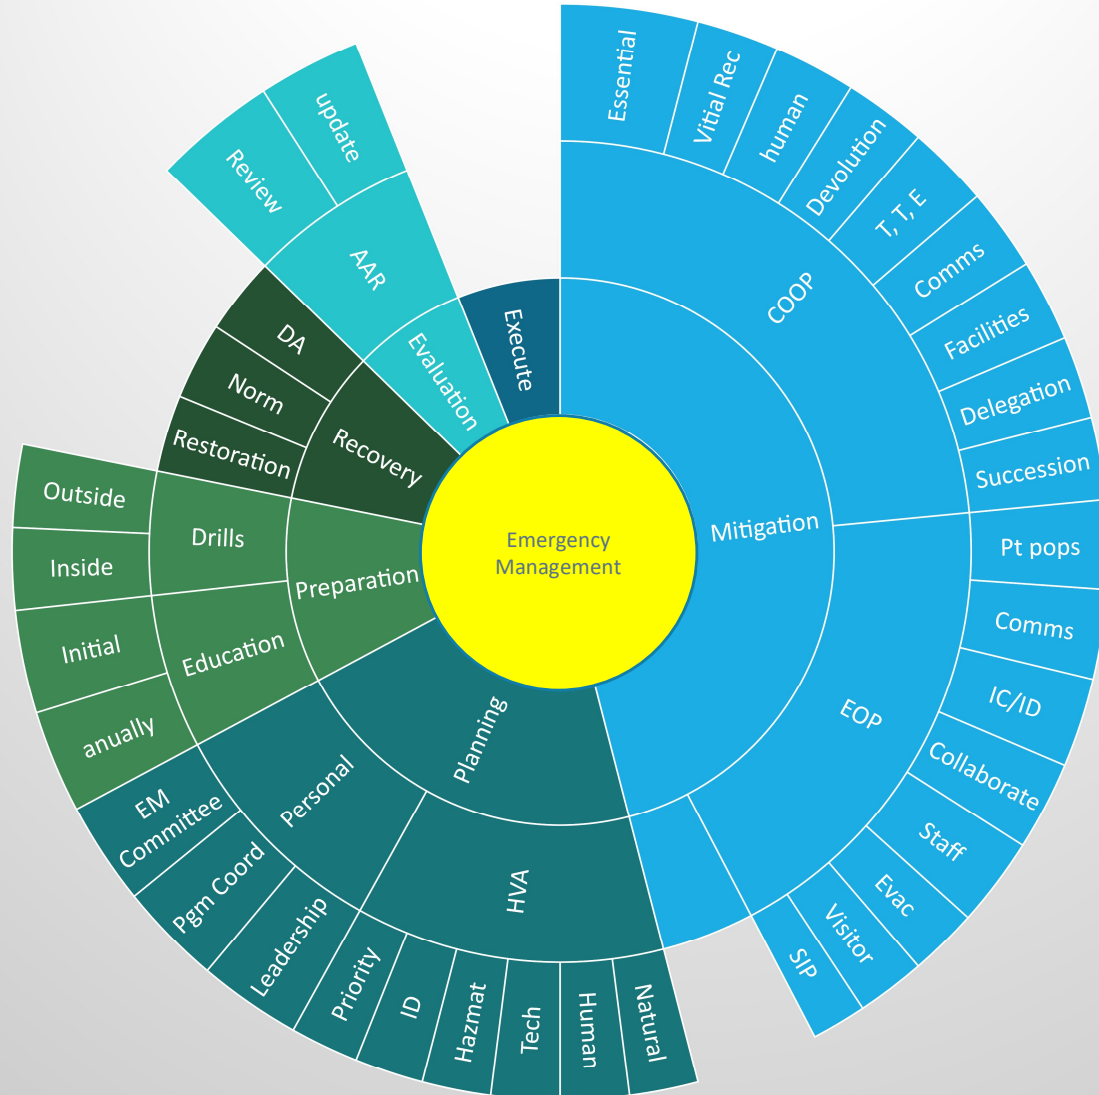

Healthcare COOP Template(s)

Template is not an off the shelf plan

- Collected information ≠ COOP plan
- Should be specific to your organization
- Should be user-friendly
- Should be regularly updated

Comprehensive Emergency Management Program

- Mitigation
- Evaluation
- Preparation
- Execute
- Recovery
- Planning
- Recovery
